PureRegen Gel Sinus

Nasal and Sinus Dressing

Novel crosslinked hyaluronan gel
For functional healing after ENT surgeries

Prevention:

Adhesion, edema, vesicle and excessive granulation etc.

Promotion:

Re-epithelization, cilia regeneration and better post-op QoL

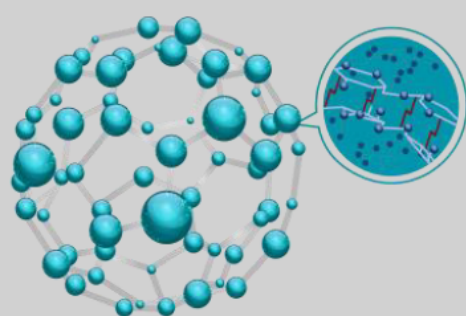

Safe

Effect

Easy

“Self-crosslinking” technology
– 44 international patents

Jelly-like Gel
High viscosity
7-14 days to absorb

Global Overview: used in more than 50 countries

PureRegen Gel Sinus

Nasal and Sinus Dressing

✓ Hyaluronic Acid plays important role in each period of wound healing.¹

- Inflammatory phase
- Granulation phase
- Reepithelization
- Remodeling

✓ At the end of surgery, it is best to use absorbable and biocompatible packing material such like hyaluronic acid gel for anti-inflammation, promoting epithelial regeneration and functional healing etc.²

✓ CLINICAL EVIDENCE

① This new absorbable hyaluronan hydrogel (PureRegen Gel Sinus), as nasal dressing/packing after ESS is safe and promotes the postoperative reepitheliazation process and reduced the presence of synechia, edema, crust, and mild mucopurulent drainage.³

② Self-cross-linked HA hydrogel (PureRegen Gel Sinus) provides superior wound healing to CMC after ethmoidectomy.⁴

Treated with HA

Control group

From the histological comparison, HA gel group:

- More regenerated cilia
- Thinner upper cortex
- More orderly distribution of monocytes
- Less inflammatory cells

③ the combination of scHA/budesonide is a valuable treatment for the FESS postoperative management and implies the potential of scHA gel (PureRegen Gel Sinus) as a topical drug sustained release scaffold.⁵

scHA gel is a new, easy-to-use, and effective wound healing packing material, helps to control inflammation, edema, crust, synechia, granulation etc. and promote reepitheliazation and cilia regeneration. It is also a potential drug release scaffold.
